Summary

Software Engineer with hands-on experience building scalable web applications using Java, Spring Boot, React, REST APIs, SQL, and MongoDB. Experienced in developing end-to-end full-stack solutions, authentication systems, reusable UI components, and backend services. Strong foundation in Data Structures Algorithms, Object-Oriented Programming, DBMS, Operating Systems, and Computer Networks. Proven ability to work in Agile environments and deliver production-ready applications through internships at StackCart and PwC Acceleration Center.

Technical Skills

Backend: Java, Spring Boot, REST APIs, Rate Limiting, Node.js, OOP Design Principles

Frontend: React.js, JavaScript, HTML5, CSS3

Database: MySQL, MongoDB, RDBMS, SQL

Tools & DevOps: Git, GitHub, Postman

Languages: Java, Python, C++, JavaScript

Core CS: Data Structures Algorithms, OOP, DBMS, Operating Systems, Computer Networks

Experience

StackCart

Software Engineer Intern

Remote

Dec 2025 – Mar 2026

- Developed and maintained a production-grade B2B e-commerce platform using React, JavaScript, REST APIs, and role-based authentication serving Seller, Buyer, and Admin modules — measured by full deployment across 3 user roles — by architecting **React** components, **REST API** integrations, and role-based access flows.
- Improved UI consistency and reduced redundant code across feature modules — measured by a shared component library reused across all dashboards — by designing reusable, maintainable frontend components.
- Delivered features like OTP verification, notifications, and analytics charts — measured by weekly iterative releases — by collaborating with stakeholders and resolving issues end-to-end in an **agile** workflow.

PwC Acceleration Center India

Launchpad Trainee

Remote

Feb 2025 – Jul 2025

- Strengthened backend fundamentals in **Java**, **SQL**, and **REST APIs** — measured by completion of PwC's structured certification program — by working through hands-on modules covering **RDBMS**, **OOP**, and web development concepts.
- Improved problem-solving ability for real-world backend scenarios — measured by consistent performance on coding assessments — by solving algorithmic and case-based challenges mapped to enterprise development workflows.

Projects

API Rate Limiter Service (Java, Spring Boot)

GitHub

- Protected backend systems from abuse — measured by **O(1)** middleware validation latency — by implementing **Token Bucket** with optimized in-memory structures in **Spring Boot**.
- Achieved high-throughput rate control under burst traffic — measured by low-latency benchmarks — by designing **middleware-level interception** with distributed-scaling-ready architecture.

ChatterBox — Chat Application (React, Node.js, Socket.io)

GitHub

- Delivered real-time bidirectional messaging — measured by **sub-100ms** delivery — by integrating **Socket.io** with a **Node.js** backend handling auth and session APIs.

HordeZee — Browser Game (JavaScript, PIXI.js)

Live Demo

- Delivered smooth 2D gameplay — measured by consistent **60 FPS** — by optimizing **PIXI.js** rendering pipeline with efficient asset handling and state management.

Education

Haldia Institute of Technology

Bachelor of Technology in Electronics and Communication Engineering

Haldia, West Bengal

2022 – 2026

CGPA: 8.31

Coursework: Data Structures & Algorithms, DBMS, OOP, Operating Systems, Computer Networks

Achievements

DSA — 300+ Problems Solved — Consistent solver across LeetCode and GeeksforGeeks, strengthening data structures and algorithmic concepts.

PwC Launchpad Certified — Completed structured training in Java, RDBMS, and web development fundamentals at PwC Acceleration Center India.
